DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohori et al. (USPN 6,446,806) in view of Machida et al. (USPN 4,770,680).

Regarding to claims 1, 4, 7, and 8, Ohori et. al. a substrate container (1) comprises a body (a mounting base 64) for seating a substrate carrier container (1); a seating detecting device (a detector on the mounting device, see col. 16, lines 15-18) for detecting whether or not the container is seated on the body; a movable power supply connector (70 shown in fig. 16) provided the body; a control mechanism (60). Ohori et al. do not disclose a rechargeable cell in the container. Machida et al. disclose a rechargeable cell (13) in the container 7. It would have been obvious to one having skill in the art to modify the container of Ohori et al. with a rechargeable cell as taught by Machida et al. in order to supply power to the container to keep the wafer from being contaminated.

Regarding to claims 3 and 6, Ohori et. al. disclose the seating detecting device (the detector mounted on the base 64) comprises at least one of a mechanical switch (locking mechanism 17)

Art Unit: 2836

Regarding to claims 2 and 5, Ohori et. al. disclose all limitations of claims 1 and 4 except for the container having an air cleaner and a dehumidifying device. Machida et al. disclose the container (7) have an air cleaner (8) and a dehumidifying device in the substrate carrier container (10). It would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the substrate carrier container of Ohori et. al. with the air cleaner and the dehumidifying device as taught by Machida et al. in order to supply clean air to keep the container from being contaminated..

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Danny Nguyen whose telephone number is (703)-305-5988. The examiner can normally be reached on Mon to Fri 8:00 AM to 4:30 PM.
